

## ABSTRACT OF DISCLOSURE

A doorframe includes a header having a header jamb and a pair of header casings. The header has first and second ends. The doorframe further includes a pair of legs, each having a leg jamb and a pair of leg casings. Each leg jamb has means for connection with the respective end of the header, at least two recessed hinge placements on a first side of the leg jamb and at least two recessed hinge placements on a second side of the first leg jamb. Each of the recessed hinge placements are suitable for receiving a first side of a hinge. A pair of precut striker plate placements and striker holes are provided on one of the leg jambs for receiving a striker of a door when the doorframe is assembled and a door is attached to the recessed hinge placements on the other leg jamb.
